

## AI Assistant

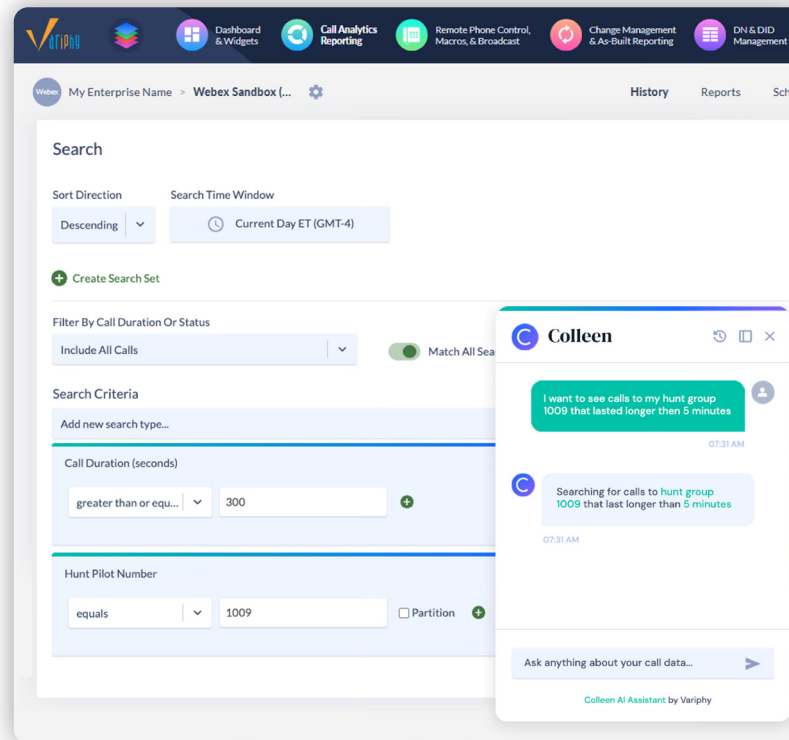

Turn simple requests into dashboards, reports, and insights you can act on.

**Colleen AI Assistant** is a natural language layer built into Variphy, making the platform accessible to new users on day one and giving experienced users a faster way to work.

### How Colleen AI Assistant Works

Ask a question or give an instruction in plain language. Colleen acts inside Variphy and shows you what it found, built, or changed:

- **Onboard** users, update permissions, and manage account settings.
- **Create** widgets without manually configuring data sources or displays.
- **Build** dashboards and reports on demand.
- **Search** call history conversationally.

### From Click Paths to Quick Prompts

⊗ Instead of ...

🗣️ Just tell Colleen ...

Navigating to call history, applying date and status filters

→ "Show me all abandoned calls from yesterday"

Opening the widget builder, selecting data sources, configuring display settings

→ "Build a widget for average call duration"

Going to user admin, finding the user, editing permissions

→ "Update permissions for John Smith"

Building a dashboard from scratch

→ "Create a dashboard for the support team"
