

# Variphy Provisioning for Webex Calling

One platform for faster Webex Calling provisioning, deeper configuration, and granular controls.

Variphy Provisioning for Webex Calling is built for teams managing it at volume who want streamlined workflows and easier handling of their environment.

## Key Capabilities

- Unified jobs across virtual lines and devices.
- Inline voicemail and call settings configuration.
- User management, including create, edit, and delete.\*
- Granular, role-based permissions for non-admin users.\*

## Handle Provisioning End-to-End

### Speed & Flexibility

Combine multiple operations into a single job. In Control Hub, the same setup is split across multiple sections.

### Smarter Configuration

Configure call settings, including voicemail, inline when a virtual line is created. In Control Hub, virtual lines start with default settings and are configured afterward in a separate step.

### Delegated Administration

Let non-admin users make changes in their own environment, so you don't need to grant full Webex admin rights to everyone who needs to make a change. Control Hub supports admin roles, but those still need to be assigned and managed by a full admin.

**Variphy turns Webex Calling provisioning from a multi-step, multi-admin process into a single workflow your team can own.**

\*Available Summer 2026.
